NPIC Project 11111/65

Photography from [] reveals 4 E-type SSGN at the Petrovka Shipyard. Two submarines are at the southernmost of the 2 main fitting-out piers and 2 are at the large pier south of the fitting-out area.

The 2 E-II-type SSGN at the main fitting-out area, one in a transporter dock and the other alongside a Skoryy-class DD, are 395 ft length overall (LOA). Discernible topside details of the 2 vessels appear identical. The end-points (bow/stern) of the submarine in the transporter dock are not as finite as those on the E-type SSGN alongside a Skoryy-class DD. Mensural characteristics of this E-II-type are

illustrated in the provisional drawing below (Figure 1) which is considered accurate to within plus or minus []

The 2 E-type SSGN immediately south of the fitting-out area appear to be those previously reported at Petrovka Shipyard, illustrated in Attachment 8 of reference 1 and described in Figure 6 of reference 2. Poor lighting and resultant lack of imagery in the midships section of these submarines preclude detailed analysis.
